**OBJECTIVES:**
To introduce perspectives on economic growth, technological change and competition in a world where geography matters and help students develop a knowledge base about the interaction between geographical space and economic processes.

**COURSE SYNOPSIS:**
The focus of this class is economic growth, technological change and competition in a world where geography matters. The aim of the class is to understand the postwar history and geography of economic growth. As global production becomes increasingly integrated, workers and firms in different regions are forced more directly into competition with one another. How do these firms, and the regions in which they are embedded, compete for the capital and labor required to sustain competitiveness? The dominant strategies of competitive advantage hinge on technology. More specifically, technological change remains one of the primary determinants of profitability and growth. Increasingly, it is recognized that the motors of national economic performance are sub-national technology districts. These innovative regions are characterized by strong ties between firms embedded in institutional structures that reinforce common sets of rules, norms, business cultures and decision routines.

**LECTURE TOPICS:**
- Introduction to economic growth
- Technological change
- Institutions & Geographies of Technology
- Agglomeration Economies and Network-Structures
- Product Space & Knowledge Space
- Economic Relatedness and Complexity
- Knowledge Flows across space
- Innovation: history and future

In order to meet the demands and challenges in this dynamic and ever-changing world, the Department has designed a series of well-structured and contemporary courses to cater to the different interests of students. Its courses are designed to align with the University’s educational aims which hope to nurture future generations not only with a critical and intellectual mindset, but also with a passion to contribute to society in general.

After completing the programme, Geography Major students should be able to:

PLO1 critically analyse the geographical aspects of the relationship between people and the natural environment;

PLO2 demonstrate and develop an understanding of how these relationships have changed with space and over time;

PLO3 identify, collect and utilize primary and secondary data to investigate and analyse the issues and problems facing people, places and society;

PLO4 integrate, evaluate and communicate information from a variety of geographical and other sources;

PLO5 participate in promoting social, economic and environmental sustainability at the local, regional and global scales; and

PLO6 effectively apply a range of transferable skills in academic, professional and social settings.
