OBJECTIVES:
This course aims to identify and examine the multiple disciplines within global health, and demonstrate an in-depth knowledge of the fundamental theories discussed in geography and global health. The course will describe and distinguish the burdens of disease at a global level (i.e., in different country or continent), as well as identify the determinants, such as physical environment, national income, debt, race, education, population pressure, and strategies that address them. The course will describe and compare the evolution of major responses to world health situations over the past century, including primary health care, child/maternal survival, and the changing mix of biological, technical, socioeconomic and political approaches. As learning outcome, students will be asked to apply basic geographical, epidemiological, cultural and behavioral fundamentals to examine and diagnose global health and development issues.

COURSE SYNOPSIS:
This course introduces students to different disease burdens and health problems across various social and economic levels throughout the world. It analyzes biological epidemiological, social, cultural, and behavioral interactions that affect global health study and project implementation. The course will cover health issues in Asia, Africa, North American and South America, given their special geographical and social environment. Students will gain an understanding of global health topics and formulate their own innovative solutions to health issues in underserved populations.

LECTURE TOPICS:
- Introduction on Geography and global health
- Africa – HIV/AIDS
- Africa – Women’s health and Nutrition
- Southeast Asia – Malaria and diarrheal disease
- Asia – Culture and mental health
- China – Air pollution and respiratory disease
- USA – opioid epidemic
- USA – obesity and food environment
- South America – Natural disaster and Health
- South America – Children’s health and TB
- Global inequality in health care coverage
- Future Directions of Global Health and student presentation

In order to meet the demands and challenges in this dynamic and ever-changing world, the Department has designed a series of well-structured and contemporary courses to cater to the different interests of students. Its courses are designed to align with the University's educational aims which hope to nurture future generations not only with a critical and intellectual mindset, but also with a passion to contribute to society in general.

After completing the programme, Geography Major students should be able to:

**PLO1** critically analyse the geographical aspects of the relationship between people and the natural environment;

**PLO2** demonstrate and develop an understanding of how these relationships have changed with space and over time;

**PLO3** identify, collect and utilize primary and secondary data to investigate and analyse the issues and problems facing people, places and society;

**PLO4** integrate, evaluate and communicate information from a variety of geographical and other sources;

**PLO5** participate in promoting social, economic and environmental sustainability at the local, regional and global scales; and

**PLO6** effectively apply a range of transferable skills in academic, professional and social settings.
